

CONTROL MODULE TECHNICAL DOCUMENTATION

MR Mono - MR Modulo

THE CONSTANT AIRFLOW
SOLUTION, EASY TO INSTALL
AND ADJUST WITHOUT TOOLS

#HealthyLiving

MR Mono - MR Modulo

INTRODUCTION

- Aeraulic disturbances within HVAC systems generate airflow variations.
- Managing to set real airflows as per those calculated in design stage, will ensure hygiene (ventilation) and thermal comfort (air conditioning) while limiting noise and optimizing fan or AHU operating costs.

RANGE

2 models:

- MR Mono - 1 code = 1 factory-set airflow,
- MR Modulo - 1 code = several airflow set point (8 references). 7 diameters (mm): 80, 100, 125, 150, 160, 200 and 250.

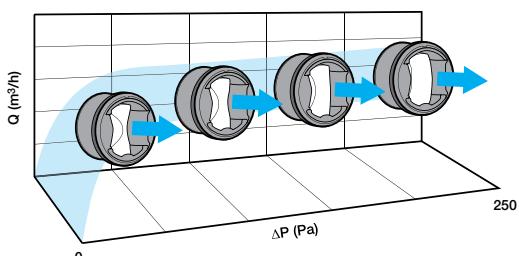

3 Pressure ranges:

- between 50 and 250 Pa for the standard MR Mono and the MR Modulo (except D80, D100 et D125 : 50-200 Pa),
- between 150 and 650 Pa for the MR High Pressure,
- between 80 and 250 Pa for the MR Modulo VMT (compliant with VMT technical approval).

PRINCIPLE OF OPERATION

- CARs (MR) purpose is airflow balancing in HVAC ductwork.
- It can be easily inserted into a portion of a circular duct network in order to regulate an accurate and constant airflow within a large differential pressure range.
- The membrane inflates or deflates depending on the pressure drop on both sides of the CAR, changing consequently the free air passage (see illustration below).

> This principle guarantees a constant airflow when the upstream/downstream differential pressure varies.

CONSTRUCTION AND MATERIAL

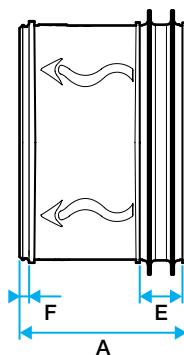

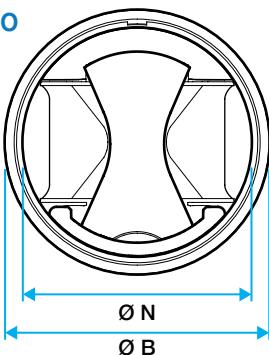

- ① Removable clips in PC / ABS plastic,
- ② Regulating silicon membrane,
- ③ Double-lip airtightness seal in elastomer,
- ④ Housing in PC / ABS plastic,
- ⑤ Rotating adjustment ring in PC / ABS plastic for airflow setting.

The following information is directly indicated on the product:

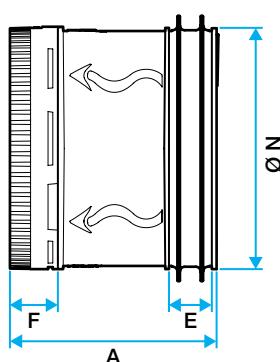

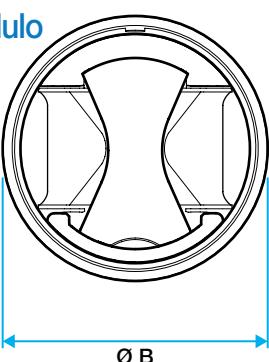

- Flow direction, diameter in mm and inch, operating differential pressure range, code, production traceability,
- MR Mono: factory airflow calibration (both in m^3/h and cfm),
- MR Modulo: airflow setting range correlation table (both in m^3/h and cfm).

DIMENSIONS - WEIGHT

MR Mono

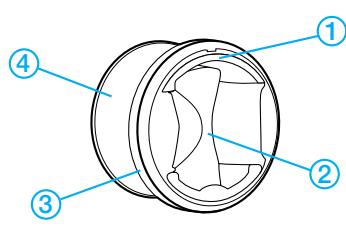

MR Modulo

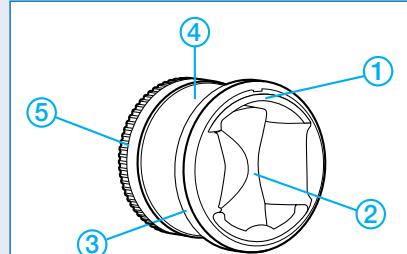

Duct Ø	in mm			MR Mono			MR Modulo		
	ØN	ØB	E	F	A	Weight (kg)	F	A	Weight (kg)
80	76	85	14	3	53	0,06	15	65	0,08
100	92	105	14	4	61	0,10	13	70	0,12
125 15-90 m^3/h	116	132	14	4	61	0,14	13	70	0,15
125 100-190 m^3/h	116	132	14	4	97	0,20	17	110	0,17
150	147	153	14	4	103	0,30	19	118	0,37

MR Mono

MR Modulo

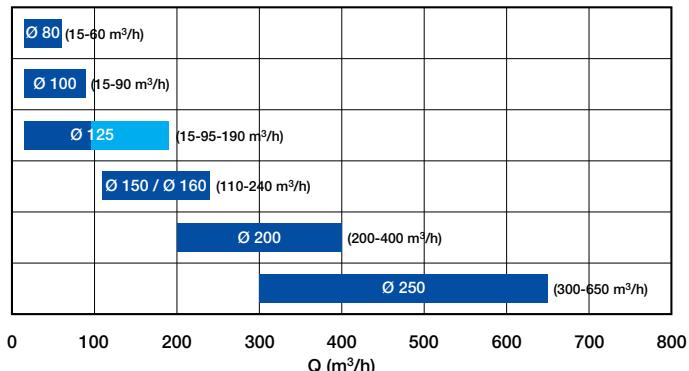

MR Mono - MR Modulo

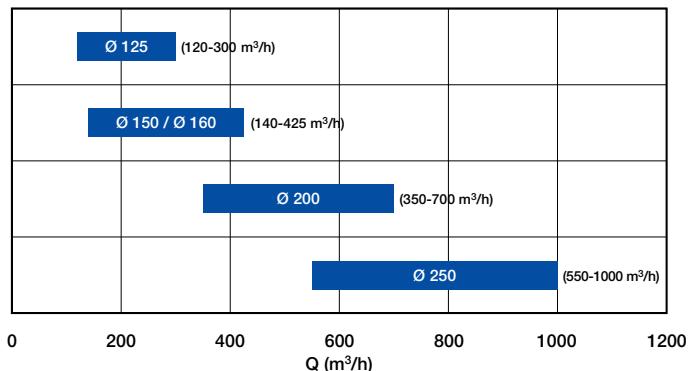

FIELD OF APPLICATION

- Maintaining airflows in ventilation or air conditioning ductworks.
- Use in air supply and air exhaust.
- Operating airflow range (see diagrams).
- Tolerance in airflow over operating range:
 - +/- 5 m³/h for an airflow ≤ 50 m³/h except VMT MR,
 - +/- 10 % for an airflow > 50 m³/h except MR Mono D80, D100 and D125 (+/-15%), MR Modulo D80, D100 and D125 (+/-10% maximum airflow) and MR VMT, 0 % / +30 % for MR VMT D125 and -5 %/+20 % for the others MR VMT (to ensure compliance with technical approval).
- Pressions différentielles fonctionnelles :
 - MR Modulo and standard MR: range between 50 and 250 Pa, (except D80, D100 et D125: 50-200 Pa).
 - MR Mono High Pressure: range between 150 and 650 Pa,
 - MR Modulo VMT: range between 80 and 250 Pa.
- Temperature range of use: -10 to 60° C.
- Compliant with DIN EN 1506 (dimensions).

ACOUSTIC FEATURES

Sound power levels of noise (Lw) at duct output:

The following tables give the sound power levels of noise (Lw) expressed in decibels per octave (dB/oct) as well as the global sound power levels in dB(A) according to the pressure drop.

These sound power levels are results of tests carried out by a Dutch independent laboratory (PEUTZ) and are given at the duct outlet.

Measures were carried out in accordance with NF EN ISO 3741 and NF EN ISO 5135 norms, with a CAR fitted into a duct with an upstream and downstream straight length equal to 3 diameters.

ACOUSTIC FEATURES

Sound power levels of noise (Lw) at duct output:

The following tables give the sound power levels of noise (Lw) expressed in decibels per octave (dB/oct) as well as the global sound power levels in dB(A) according to the pressure drop.

These sound power levels are results of tests carried out by a Dutch independent laboratory (PEUTZ) and are given at the duct outlet.

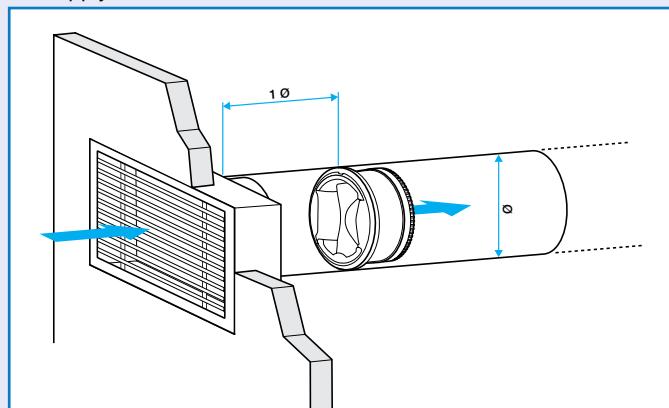

Measures were carried out in accordance with NF EN ISO 3741 and NF EN ISO 5135 norms, with a CAR fitted into a duct with an upstream and downstream straight length equal to 3 diameters.

MR Mono - MR Modulo

- The MR will push-fit into circular ducts in close proximity to a take-off or a terminal.
- It is important to observe the MR orientation corresponding to the airflow direction indicated on the MR.
- Horizontal / vertical mounting possible.
- In order to avoid acoustic and aeraulic disturbance it is recommended to respect the following distance between the MR and the terminal (grille / diffuser / inlet):
 - in exhaust: $D = 1 \varnothing$,
 - in supply: $D = 3 \varnothing$.

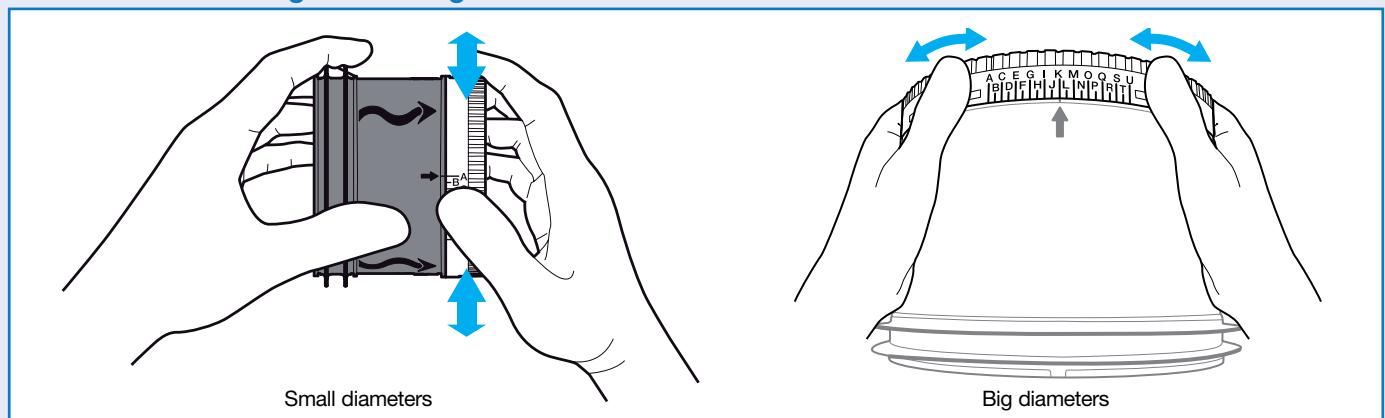

Air exhaust

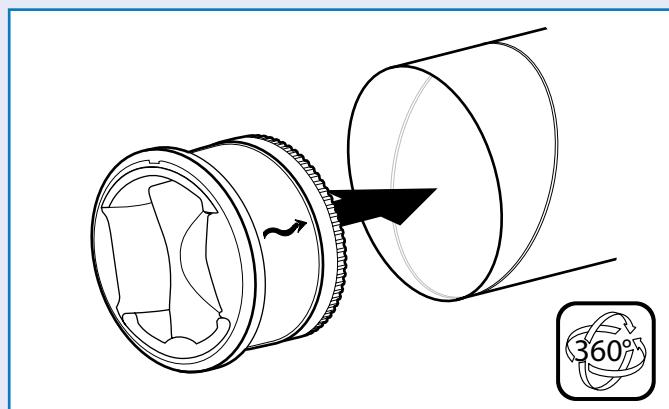

Air supply

MR Modulo mounting and setting

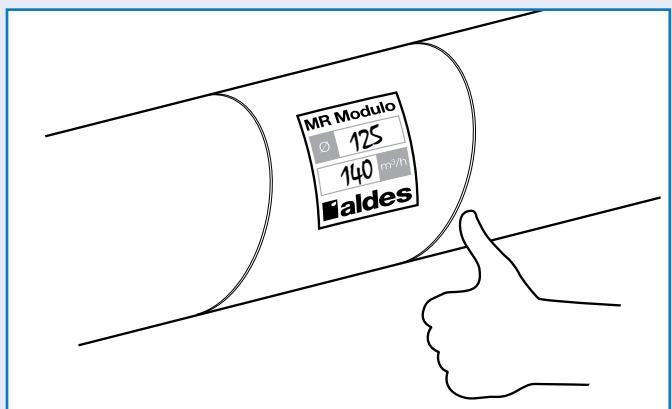

1. Adjust the airflow setting

Rotate the adjustment ring for a tool-free airflow setting until the desired airflow according to the correlation table p.9.

2. Position the MR Modulo

Introduce the MR in the duct according to the arrow which shows the airflow direction. Minimum straight upstream and downstream distances must be observed. There is no recommendation regarding the membrane positioning.

3. Product localization

MR Modulo is delivered with a sticker which will be needed to be manually filled on site (MR diameter and airflow setting) and placed directly onto the duct to show where the MR Modulo has been mounted.

MR Modulo

Correlation table

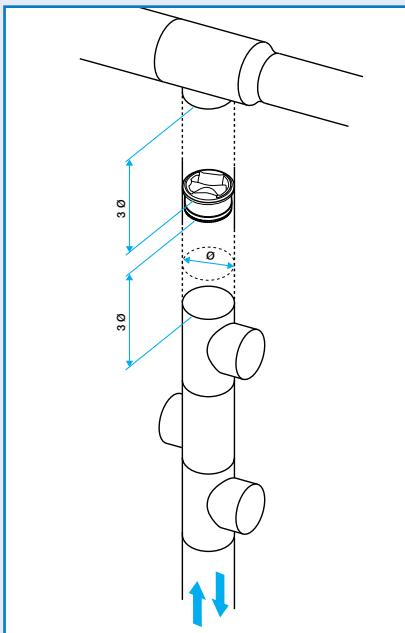

For certain diameters, the same letter on the ring may correspond to two airflow values.
To enable this, the shim must be inserted or removed .

MR Mono - MR Modulo

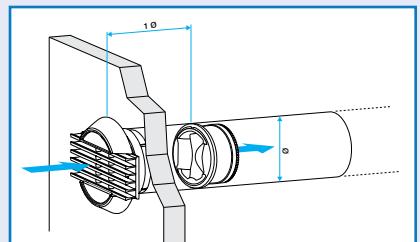

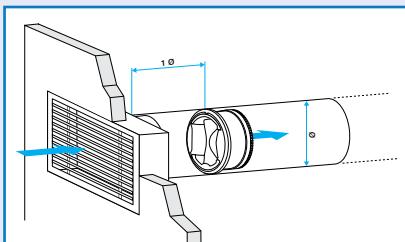

APPLICATION EXAMPLE

Airflow stabilization within an HVAC network portion

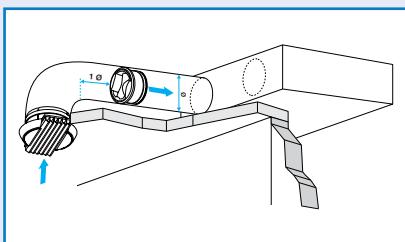

Exhausted airflow stabilization

- In exhaust, a $1\varnothing$ -distance is recommended between the CAR and the terminal to insure air velocity harmonization in the duct to avoid aeraulic and acoustic disturbance.

1/ MR installed after a supply plenum box

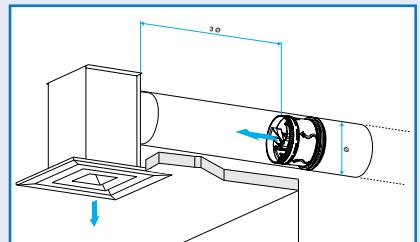

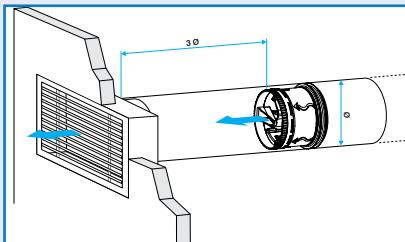

2/ MR installed after a BIM-type grille

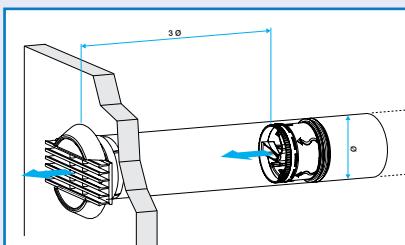

3/ MR installed before a fancoil

Supply airflow stabilization throughout a terminal

- In supply as well a $3\varnothing$ -distance is recommended between the CAR and the terminal to insure air velocity harmonization in the duct to avoid aeraulic and acoustic disturbance.

1/ MR installed before a supply plenum box

2/ MR installed before a BIM-type grille

MR Mono - MR Modulo

MAF

MR performances are not altered by clogging, therefore it requires practically no special maintenance.

- If used in an atmosphere where there is a lot of particles, sleeves with inspection window are recommended to allow regular inspection.
- When cleaning, plug the hole on the plastic body, at the base of the bulb, in order to avoid any blocking of this orifice and to prevent any liquid or foreign body from passing inside the membrane.

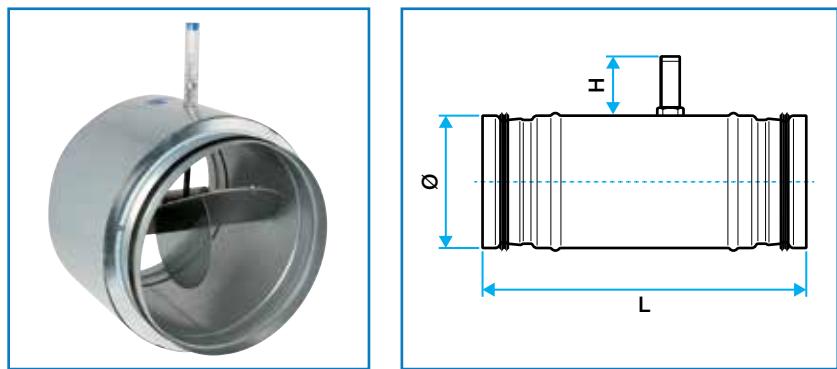

Description	Code
Window sleeve Ø 100	11013121
Window sleeve Ø 125	11013122
Window sleeve Ø 150	11013123
Window sleeve Ø 160	11013124
Window sleeve Ø 200	11013125
Window sleeve Ø 250	11013126

MR Max

- The MR Max is especially adapted for specific systems requiring big diameter (up to 400 mm), high pressure (up to 1 000 Pa) and high airflow (up to 4 000 m³/h).
- The MR Max is available from diameter 80 mm to 400 mm.
- The MR Max works with a free-moving control plate. The airflow can be set from outside.

REGULATION AND AIR-BALANCING OFFER FOR HVAC DUCWORKS

As a leader in ventilation and thermal comfort, Aldes offers a wide range of products for airflow balancing and control:

Passive range

Balancing dampers.

RG
Commissioning damper

CRGN
Rectangular balancing dampers

Iris
Iris damper

Automatic range

Constant airflow steadiness irrespective of pressure variations.

MR Mono
Constant Airflow Regulator single-airflow

MR Modulo
Constant Airflow Regulator multi-airflow

MR Max
Constant Airflow Regulator high pressure, high airflows

RMA
Motorized Constant Airflow Regulator motorized

Active range

Variable flow rate control according to instructions.

MDA Mod
Timed proportional regulation damper

VAV
Variable Air Volume

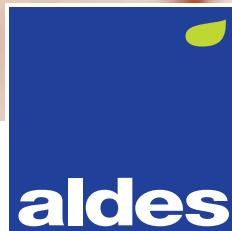

#HealthyLiving

Because air is not just for us to breathe but it also helps us live a healthier life, Aldes commits to taking care of the health of each building occupant.

Our skills in air management enables us to help design indoor living spaces that are smart and caring. Where we live, work and have fun, Aldes watches over our well-being through innovative solutions that improve indoor air quality.

High-performance solutions that respect the environment, enabling the renewal and purification of indoor air, heating it, cooling it, and providing domestic hot water.

More than just a movement, **#HealthyLiving** embodies our principles of being caring and responsible, as well as our pioneering spirit.
